

Awaken Conversations - Conversational Analytics

Listen to your customers like
never before

Awaken Conversations

Analyze every call, email and message to truly understand the voice of your customer and the wellbeing of your agents.

Our conversational analytics solution uses natural-language AI technology to analyze the words and sentiment of your customer conversations so you can make lasting improvements to your business interactions and processes.

How does Awaken Conversations work

Awaken Conversations combines both voice and text analytics to enable contact centers around the world to perform deep analysis of calls between their agents and customers.

Speech is translated into readable transcripts while patterns in spoken audio are also analyzed to identify the emotion and intent of the conversation. Conversational Analytics helps you to understand the valuable context behind your customer call metrics, providing an easy way to reduce unnecessary calls, monitor compliance, understand agent wellbeing and manage quality assurance.

Why use Conversational Analytics?

- Automating quality assurance across 100% of interactions
- Modelling agent best practice to significantly increase sales
- Managing risk, fraud and compliance
- Identifying actionable improvements
- Measuring customer experience (CX) and customer satisfaction
- Understanding why customers are getting in contact and how to help them
- Proactively managing employee wellbeing
- Reducing sickness and improving employee retention

Automate Quality Assurance
on 100% of interactions

Improve customer satisfaction
by 50%
